ROCTAVIAN® (valoctocogene roxaparvovec-rvox) is provided in 10 mL vials containing an extractable volume of no less than 8 mL (16×10^{13} vg). Dose volume is based on body weight. To calculate a patient's dose in milliliters (mL), multiply body weight in kg by 3. The multiplication factor 3 represents the per-kilogram dose (6×10^{13} vg/kg) divided by the amount of vector genomes per mL of the ROCTAVIAN solution (2×10^{13} vg/mL). To calculate number of vials to be thawed, divide patient's dose volume in mL by 8 and round up to the next whole number of vials.
